

Master degree programme

Website

Hydraulic Engineering

The aim of study program „Hydraulic engineering“ – training highly qualified specialists of engineering, who are able to conduct scientific or applied research, to use advanced scientific methods for evaluation of water engineering structures as water supply and wastewater treatment plants, polders, dams, ponds, pumping stations, drainage, hydraulic and other structures, and their environmental impact, to integrate knowledge of different fields in solving theoretical and practical problems of water resources engineering, analysis and simulation of environmental changes and processes of engineering nature.

Faculty of Water and Land Management

Group of Fields of Study Engineering Sciences (E)

Length of Programme 2 years

ECTS credits 120

Name of Qualification Master of Engineering Sciences

Tuition fee (per year) 4787 Eur

Contacts:

VMU Agriculture Academy International Coordinator dr. Ekaterina Makrickiene
