Aquamatics

The double diploma second-cycle study program is created to prepare highly qualified environmental engineering specialists who are able to solve theoretical and practical problems of water management, analyse and model natural water phenomena and engineering processes using the latest technologies and integrate knowledge from different fields. The program is oriented to expanding knowledge and understanding threats of climate change and rationally evaluating/predicting ecological effects on the environment.

Faculty of Engineering

Group of Fields of Study Engineering Sciences (E)

Length of Programme 2 years

ECTS credits 120

Name of Qualification Master of Engineering Sciences

Double degree study programme in cooperation with the University of Silesia in Katowice (Poland)
