

## **Hydraulic Engineering**

The aim of study program "Hydraulic engineering"— training highly qualified specialists of engineering, who are able to conduct scientific or applied research, to use advanced scientific methods for evaluation of water engineering structures as water supply and wastewater treatment plants, polders, dams, ponds, pumping stations, drainage, hydraulic and other structures, and their environmental impact, to integrate knowledge of different fields in solving theoretical and practical problems of water resources engineering, analysis and simulation of environmental changes and processes of engineering nature.

Faculty of Engineering
Group of Fields of Study Engineering Sciences (E)
Lenght of Programme 2 years
ECTS credits 120
Name of Qualification Master of Engineering Sciences

## **Contacts:**

VMU Agriculture Academy International Coordinator dr. Ekaterina Makrickiene ekaterina.makrickiene@vdu.lt

## **Address**

Studentų str. 11, Akademija LT-53361 Kaunas district, Lithuania
